

CLIMBING PLATFORM SYSTEMS

WSP - Wind Shield Platform

Mesa WSP Wind Shield Platform System used for safety and for protection in high-rise buildings.

With this system the cost for extra safety measurements are reduced.

The system can be lifted to upper levels by crane or it can self-climb by basic hydraulic equipments.

Provides a safe space both for working and for material loading.

The system is made of standard components which make it possible to reuse at different construction projects easily.

It is designed for high-rise buildings to withstand high level wind forces.

Area of usage.

Mesa WSP Wind Shield Platform System offers a wide range of usage thanks to its universal design.

The system provides a big working space for formwork systems and wallform systems, before the concreting.

It also provides a safe, reachable and effective working area for workers during the concreting.
